

Factory Training Schedule 2024

Measurement & Production Solutions

> Welcome

At TechnipFMC, supporting our clients and ensuring their ongoing business success is a key element of our foundation. Our training schools reflect the experience and knowledge gained working nearly 100 years in the oil and gas industry. Practical training combined with the Best Measurement Practices founded by our Aftermarket Group, offer you exceptional experience in an environment that delivers knowledgeable results.

The pandemic we faced brought periods of uncertainty. This also forced some into alternative career roles, such as field technicians and operators. Over the last few years, those remaining in the workforce have utilized our workshops as a stepping-stone to become proficient in some of the unfamiliar duties and responsibilities they have assumed. Our training schools provide you with quality instruction taught by the same measurement specialists that design, engineer, and service our equipment. Our workshops demonstrate proper use of equipment and simulators, with hands-on, in-depth experience. The skill-sets gained in our courses promote product and application knowledge and enhances students' practical expertise, resulting in employees who can autonomously install, configure, maintain, and repair your system.

Training schools may be customized to meet a client's particular need by combining courses and focusing on their installed equipment. The need for training has never been more important than it is today. Register now for one of our elite workshops and gain valuable knowledge, in a specialized training environment that will provide you and your employees with the confidence to achieve safe, reliable, and efficient system operation on the job.

> Is the knowledge of your workforce where you need it?

Whether your employees are industry veterans or new to the field, we believe in supporting our clients and ensuring their ongoing business success. TechnipFMC courses reflect the experience and knowledge gained working nearly 100 years in the oil and gas industry.

We offer **Factory Training** at TechnipFMC's global facilities where experienced measurement specialists perform theory and hands-on training. These courses, given by experienced professionals and utilizing both real field equipment and simulators, offer students valuable knowledge and practical experience.

If you prefer to have an **In-Person On-site Training** at your facility, our trainers/technicians can come to you.

Choosing on-site training can reduce travel costs and still obtain the same high-level expert training for your personnel. Trainings can be standard or unique to your needs.

New to the TechnipFMC training options, we now offer **Virtual Training** that enables on-line participants to learn via presentations, live-stream demonstrations, and real-time Q&A. This unique style program provides the same knowledge and expertise while allowing for interaction similar to that offered in traditional TechnipFMC in-person training programs. This type of training can save on travel cost and can be arranged around busy schedules.

We look forward to sharing our knowledge and experience with you at any of our training venues. If you require other training services, please do not hesitate to contact us.

To register for any of our classes, please email us at **MPSTraining@TechnipFMC.com** or give us a call at **+1 844 798 3819**
