

This update applies to the Operator Guide (Bulletin MN06053 Issue/Rev. 0.4 (5/96)) for all AccuLoad IIs operating with AccuLoad II-SEQ Revision 21 and above firmware.

System parameter 212 was added to enable low flow start as a percentage of the preset amount. A two-digit entry defines the percentage of the preset to be delivered during low flow start. This value will only be used if the calculated percentage of preset exceeds the low flow start volume programmed in parameter 201. When this amount has been delivered, the valve will open and the flow will go to the high flow rate. The range of this entry is 0 to 99 percent.

Code	Description
System 212	Low Flow Start Percentage

The specifications contained herein are subject to change without notice and any user of said specifications should verify from the manufacturer that the specifications are currently in effect. Otherwise, the manufacturer assumes no responsibility for the use of specifications which may have been changed and are no longer in effect.
